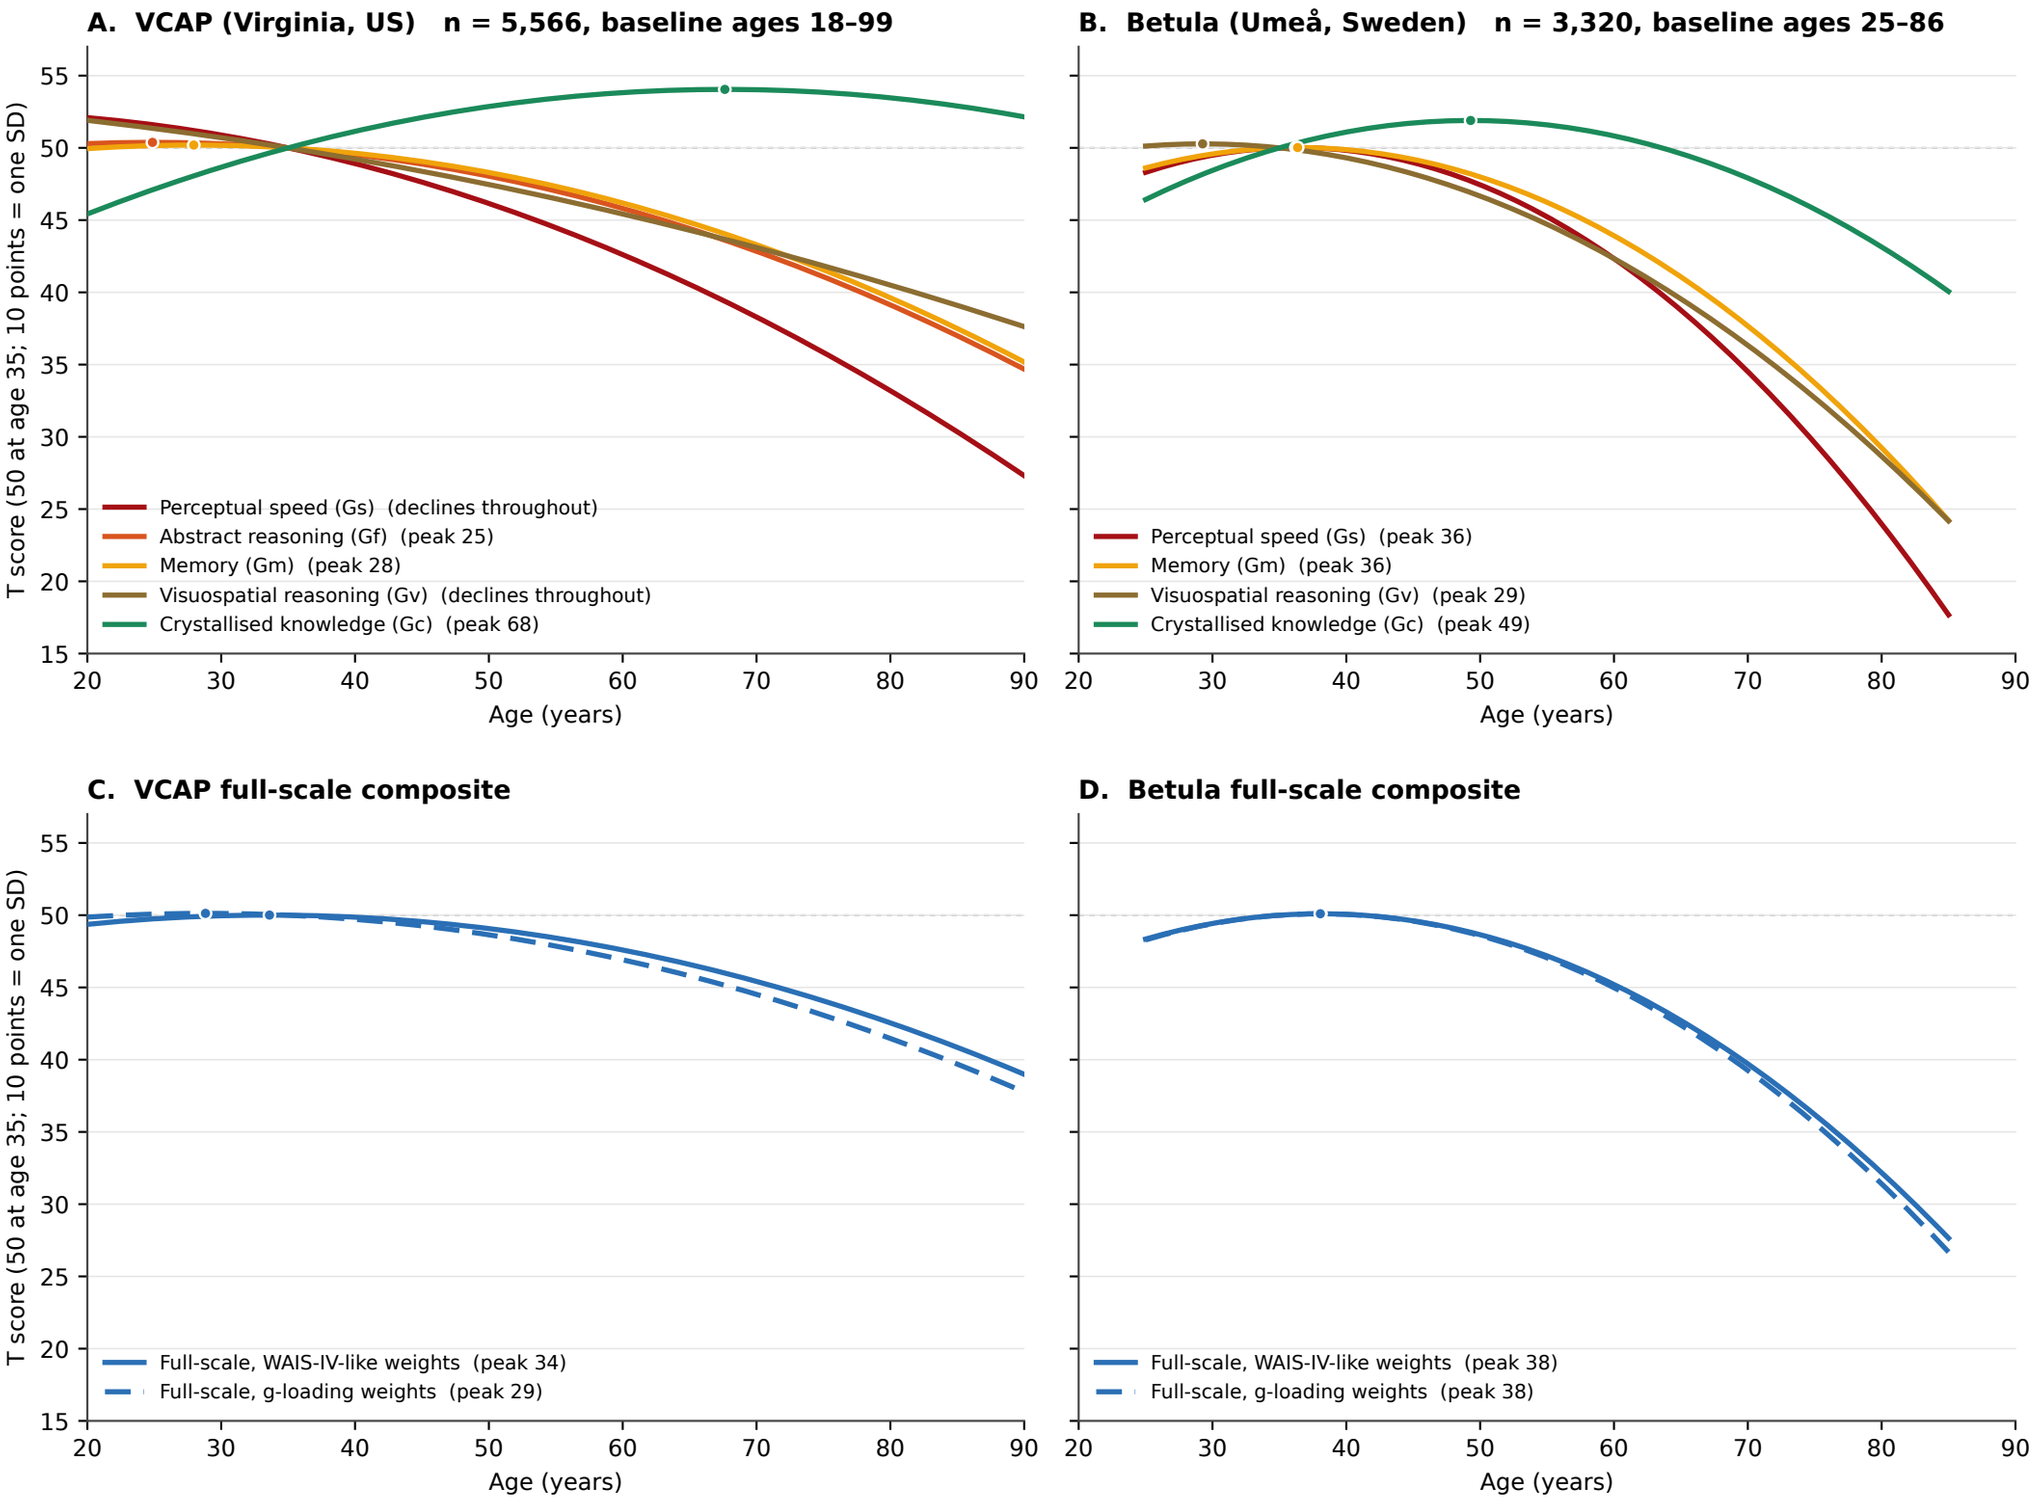
Retest-adjusted longitudinal cognitive trajectories (Tucker-Drob et al. 2022)


Model-implied population-mean trajectories from the published growth-curve parameters (Tables 1–2), net of practice effects. SD = within-age SD at baseline. Dot = peak.
Full-scale composites (C–D) are weighted means of the domain scores: WAIS-IV-like weights (30% Gc, 30% reasoning, 20% memory, 20% speed) or weights proportional to each domain's g-loading.
